

Neck/Back Pain?

DRX9000 may offer a nonsurgical solution

What is the DRX 9000?

The **DRX9000** is the newest most technologically advanced method of treatment for chronic neck and back pain. This non-invasive, non-surgical decompression unit helps alleviate chronic pain.

What does the treatment consist of?

The **DRX9000** treatment consists of a 6 week protocol at 30minute intervals. Treatment during this six week protocol includes:

- Spinal Decompression (Via **DRX 9000**).
- Pain Control (E-stim and Ice).
- Core stabilization/ isometric strengthening
- MedX training
- Stretching techniques

How does it work?

Unlike traction, a generalized pull on the spine, spinal decompression targets a specific problematic disc. A “pull” is then placed on either the cervical or lumbar spine over a 30 minute period. Over the six week protocol the involved disc should begin to regain its normal appearance. Pain levels will also decrease as well as other signs and symptoms.

Am I a candidate for the DRX9000?

Spinal decompression can alleviate neck and back pain caused by:

- Herniated discs
- Bulging discs
- Spinal stenosis
- Neck/Shoulder pain
- Headaches
- Degenerative Disc disease

(Lumbar decompression shown)

For more information on the DRX 9000 speak with the doctors at **Tampa Bay Bone and Joint**, or call **265-2221** and ask for Lindsey.
